Afterpay Limited, Australia   July 2017 – Present
Software QA Analyst

- Working in an Agile environment (TDD/BDD), mainly to perform functional and risk-based testing on Afterpay payment platforms;
- Testing requirements for standalone and integrated health solutions which involve private and public health funds (Medicare) in bank POS terminals (ANZ, NAB, Suncorp);
- Testing other deliveries such as new network solutions for banks with new terminals, app releases for terminals, upgrade Admin and Merchant portals;
- Perform API testing, JSON, SOAP, REST API via Postman to validate backend quality;
- Load testing involving JMeter on mock servers to measure performance in UI and API level;
- Test case and defects managed in Test Rail and JIRA; Contribute to project/how-to documentations in Confluence;
- Assist in promoting and deploying product to mock environments before production phase;
- Product promoting and deployments are executed in Jenkins and Buildkite (CI environment process);
- Running queries on Sumo, Splunk and SQL for tracing logs and database records;
- Pushing for shifting quality to left by adopting QA early from requirements phase. Apply domain specific risk, review developer implementation and unit tests.
- Involved in development and execution of automation test frameworks with Selenium WebDriver (Java) and Cypress (Mocha JS);
- Setup daily automation test runs via integration with Buildkite pipeline.
- Involved in successful platform migration from on-premise to AWS cloud. Ensured zero impact to customers post-migration by performing Post Verification Tests.
- Projects involved: Optus, Stripe and Cybersource payment gateways, Medicare with ANZ, NAB, Suncorp;

Accenture Solutions, Malaysia   April 2013 – April 2017
Senior QA Analyst

- Perform functional testing on Distribution Management System: Back Office and client handheld devices;
- Automation testing involves the utilization of Selenium Webdriver in Eclipse IDE.;
- Scripting in Java language and increase coverage of software test automation;
- Debug and prepare automation report on weekly run basis related to latest product release;
- Perform and maintain weekly automation bulk runs on remote server and local machine;
- Provide support to teams in Singapore and India who are implementing automation framework in their respective environment;
- Assist and train QA staff who are new to automation scripting;
- Perform device certification testing on client devices installed with Android/iOS operating systems: Motorola MC67, Intermec CN51, iPad, iPhone, Samsung tablets and phones;
- Perform patching and environment setup (database and communication agent) on QA servers;
- Liaise with Project Manager and developers to resolve defects and to understand client requirements;
- Run tests and trace backend data via SQL Management Studio;
- Monitor and resolve defects via Mantis (web-based bug tracking system);
- Test cases and test item results are managed in Team Foundation Server;
- Projects involved: JTI, Danone, Nestle, PMI (Philip Morris);

NorthgateArinso, Malaysia   January 2011 – April 2013
